

PREPARATION OF GEL:

Because refrigeration is required for Benzamycin after it is mixed, the product is shipped to you with the necessary ingredients supplied separately.

The contents of your package includes:

- 1 jar of benzoyl peroxide gel
- 1 plastic vial containing erythromycin powder
- 1 vial containing denatured alcohol (or 2 vials for the 46.6 gram package of generic Benzamycin Gel)
- 1 plastic stirring instrument.

The amount of each component is pre-measured for easy preparation.

Step 1. Add the entire contents of the vial(s) (with **GREEN** cap) containing denatured (ethyl) alcohol to the vial containing the erythromycin powder (**white** cap). Close the lid tightly and shake until all of the powder is completely dissolved.

Step 2. Add the alcohol/erythromycin mixture that was prepared in *Step 1*, slowly, to the jar containing the benzoyl peroxide gel while stirring slowly with the plastic stirring instrument.

Step 3. Stir the final mixture until it is homogeneous in appearance (approximately 1 to 1.5 minutes). Store in refrigerator until needed for use. Once mixed, the final preparation has a shelf life of 3 months.

TO REFILL YOUR BENZAMYCIN PRESCRIPTION:

Technically, there are no refills allowed on pharmacist-prescribed medications. However, you may request a new prescription by doing the following:

1. Open your browser and go to RxPalace.com
2. On the LEFT pane you'll see a link "LOGIN HERE"
3. Use the login and password that was emailed to you to log in.
4. Select "Order Prescriptions" near the top of the page.
5. Choose the item you want from the list.
6. Fill in anything that is blank on the page.
7. Proceed all the way through checkout as you've done before.
